

## Initial assessments - main findings related to the sustainability goals of the Responsible Sourcing Program in coriander

Resilient Livelihoods	Environmental sustainability	Safe living & working conditions	Worker rights & child labour
Low crop diversity in Kota, higher in Jodhpur	No land (HCV) conversion issues	Very poor migrant harvest worker accommodation and sanitation	Gender based discrepancy in payment for the same work and below min wage (Kota)
Room to reduce cost of production and post-harvest loss	Little known of pollinators and risks	Access to drinking water, but potability is unsure; poor storage in field	Workers rely on credit but no compulsion to work was found
Aware of local and national support schemes and high participation	High soil erosion losses in some areas	No/ very low PPE use / no awareness/ women wash contaminated clothing at home	Child labour not observed, and appears low risk
Unorganized – low purchasing power	Irrigated – flood + sprinkler. Water availability declining reported	No safe disposal mechanisms for pesticide containers	
Farmers dependent on credit	IPM elements practiced but some high risk chemicals still used + low awareness		
No food security challenges for workers or farmers	Waste management poor - no safe disposal of pesticide containers
